

In the Claims:

Please replace claim 4 with the following rewritten claim:

4. (Twice Amended) A photographic photosensitive material which either has only one of or none of a color correcting function for carrying out color correction of an image which has been subjected to developing processing and a sharpness enhancing function for enhancing sharpness of the image which has been subjected to developing processing, wherein an identification code is recorded optically or magnetically onto said photographic photosensitive material, or is recorded onto a storage element provided at a cartridge accommodating said photographic photosensitive material, said identification code expressing that said photographic photosensitive material either has only one of or none of said color correcting function and said sharpness enhancing function.
